

The AIO module standoff height should be 0.250 inches (6.35 mm).

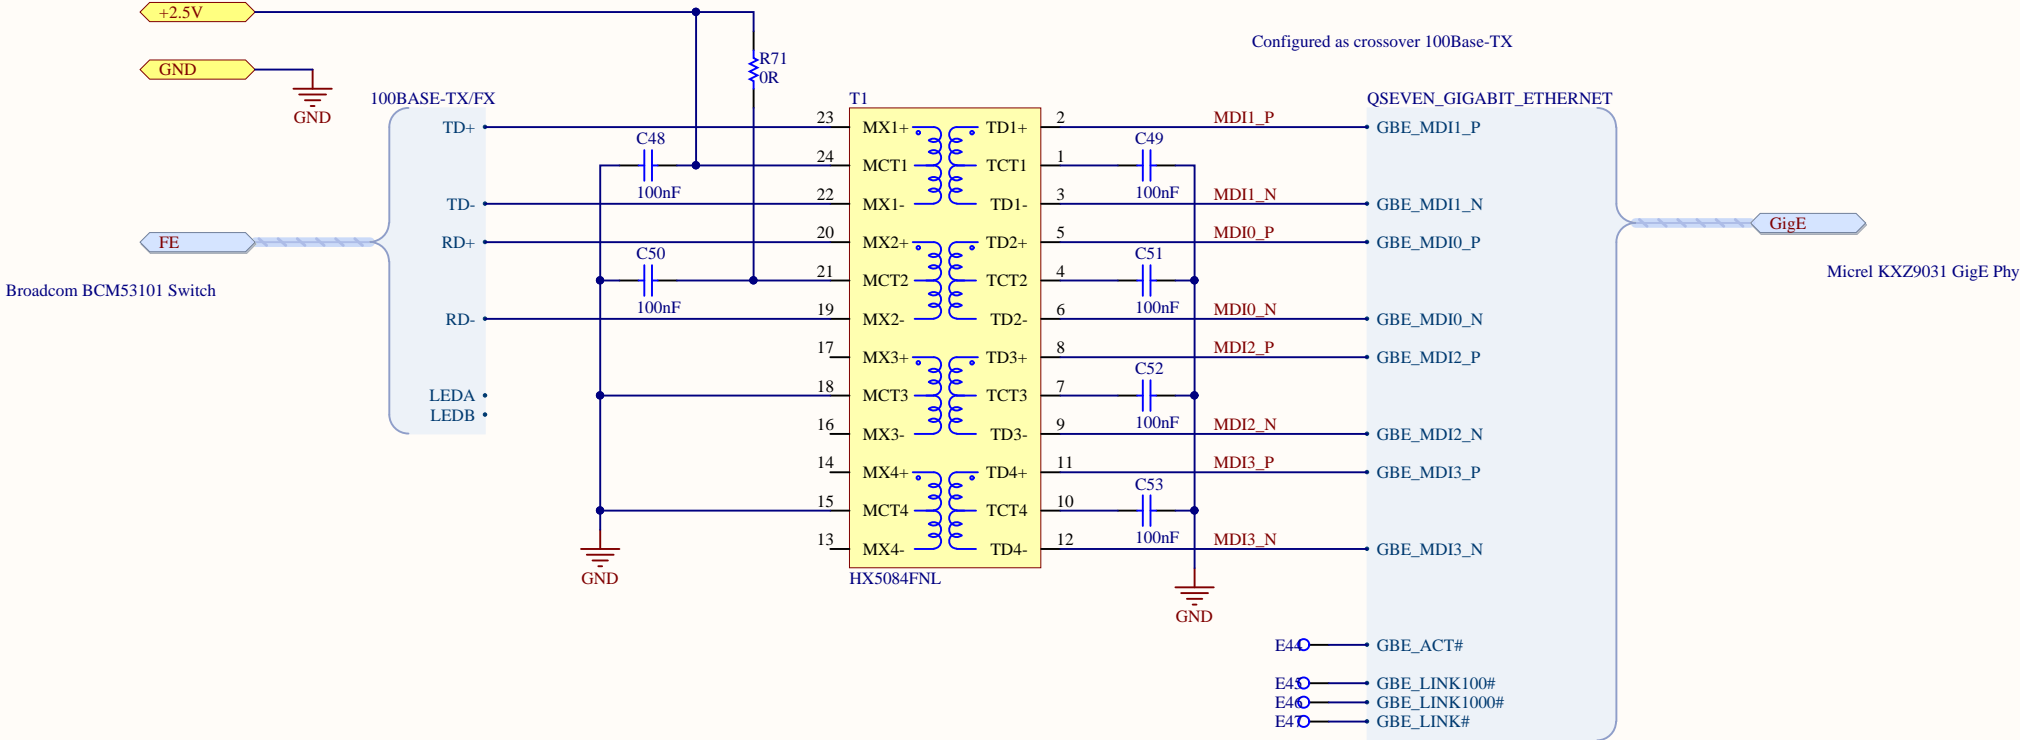

GTI\_nDET will be tied to GND by the GTI system.  
This signal can be used by the TMS570 to detect when the GTI is plugged in.

GTI\_ID determines the type of board the ground test system is connected to.  
Pins should be GND (0) or Floating (1).  
No board connected = 1111

Analog input range is 0 to 15 V.  
Rin = TBD (~100 to 500 kOhms)
